List of abbreviations	viii	Granular cell tumour	79
Foreword	ix	Ectopic thyroid and parathyroid tissues	81
		Sample reports	83
1 Introduction to the WHO Reporting System for Lung Cytopathology	1	5 Diagnostic category: Atypical	85
Background	2	Introduction	86
The role of lung cytopathology	6	Definition	86
Diagnostic categories and report structure	8	Discussion and background	87
Risk of malignancy and management recommendations	11	Risk of malignancy and management recommendations	90
		Sample reports	91
2 Lung cytopathology techniques	13	6 Diagnostic category: Suspicious for malignancy	95
Sampling methods		Introduction	96
FNAB techniques and specimen management	14	Definition	96
Bronchial wash and bronchial brush techniques and specimen management	16	Discussion and background	97
Bronchoalveolar lavage techniques and specimen management	18	Risk of malignancy and management recommendations	99
Sputum sampling techniques and specimen management	20	Sample reports	100
Rapid onsite evaluation	22	7 Diagnostic category: Malignant	103
Cell preparation methods	24	Introduction	104
Ancillary testing		Definition	104
Introduction: The role of ancillary testing	26	Discussion and background	105
Immunocytochemistry	27	Risk of malignancy and management recommendations	108
In situ hybridization	31	Specific malignant lesions	
Molecular testing	34	Non-small cell carcinomas	
		Adenocarcinoma of the lung	109
3 Diagnostic category: Insufficient/Inadequate/Non-diagnostic	39	Squamous cell carcinoma	114
Introduction	40	Non-small cell carcinoma NOS	118
Definition	40	Other specific carcinomas	
Discussion and background	41	Salivary gland-type carcinomas	120
Risk of malignancy and management recommendations	44	Adenosquamous carcinoma	123
Sample reports	45	Pleomorphic carcinoma	126
		Pulmonary blastoma	128
4 Diagnostic category: Benign	47	Carcinosarcoma	129
Introduction	48	NUT carcinoma	131
Definition	48	Thoracic SMARCA4-deficient undifferentiated tumour	133
Discussion and background	49	Neuroendocrine neoplasms	
Risk of malignancy and management recommendations	50	Neuroendocrine tumours	
Inflammatory processes		Carcinoid/neuroendocrine tumours of the lung	135
Acute inflammation and suppuration	51	Neuroendocrine carcinomas	
Histiocytic, lymphocytic, and eosinophilic inflammatory patterns	53	Small cell lung carcinoma	139
Granulomatous disorders	58	Large cell neuroendocrine carcinoma	142
Inflammatory and reactive changes in glandular cells and squamous cells	61	Lymphoproliferative diseases	
Benign neoplastic lesions		Lymphomas	144
Pulmonary hamartoma	66	Pulmonary Langerhans cell histiocytosis	147
Sclerosing pneumocytoma	68	Erdheim–Chester disease	148
Solitary tracheobronchial papilloma	71	Other malignancies	
Salivary gland neoplasms	72	Spindle cell tumours	150
PEComa	73	Paraganglioma	154
Spindle cell tumours	75	Diffuse pleural mesothelioma	156
Meningiomas	78	Primary germ cell tumours of the mediastinum	163
		Primary angiosarcoma of the lung	168
		Pulmonary and thoracic metastases	170
		Sample reports	173

8 Management recommendations for each diagnostic category	177	Contributors	185
Introduction	178	Declaration of interests	187
Insufficient/Inadequate/Non-diagnostic	179	Sources	189
Benign	181	References	193
Atypical	182	Subject index	209
Suspicious for malignancy	183		
Malignant	184
